The MAPPER 2.0 Software License is a legal agreement, governed by the laws of Switzerland, between an end user (the "*Licensee*"), either an individual or an entity, and Dr. Peter Güntert (the "*Licensor*"). The program package MAPPER 2.0 (copyright (c) 2002 by Peter Güntert) for semiautomatic sequence-specific NMR assignment in proteins by global sequence mapping, comprising all computer programs, source code, license keys, documentation, example data and other files delivered to the *Licensee*, as well as any copies, modifications or derivative works made by the *Licensee*, are hereinafter referred to collectively as the "*Software*". A derivative work is any software that contains one or several parts of the *Software* in original or modified form. If the *Licensor* provides the *Licensee* with updates of the *Software*, these will become part of the *Software* and will be controlled by this license.

1. The *Licensor* grants to the *Licensee* a non-exclusive, non-transferable, permanent license to install and use the *Software* on computer systems located at the site of the *Licensee*'s organization. However, a violation of any of the clauses of this license agreement by the *Licensee* shall terminate automatically and with immediate effect the *Licensee*'s right to install, use or store the *Software* in any form. Use of the *Software* is restricted to the *Licensee* and to direct collaborators who are members of the organization of the *Licensee* at the site of the *Licensee* and who accept the terms of this license. The *Licensee* shall neither use the *Software* to produce other software that duplicates functionality of the *Software* nor translate source code of the *Software* into another programming language.

2. The *Licensor* retains at all times ownership of the *Software* delivered to the *Licensee*. Any modifications or derivative works based on the *Software* are considered part of the *Software*, and ownership thereof is retained by the *Licensor*. All parts of the *Software* must carry the copyright notice, will be controlled by this license, and will be promptly destroyed by the *Licensee* upon termination of this license.

3. The *Licensee* shall not disclose in any form the *Software* or any modifications or derivative works based on the *Software* to third parties without prior written authorization from the *Licensor*.

4. The *Licensee* agrees that the *Software* has been developed in connection with academic research projects and is provided "as is". The *Licensor* disclaims all warranties with regard to the *Software* or any of its results, including any implied warranties of merchantability or fitness for a particular purpose. In no event shall the *Licensor* be liable for any damages, however caused, including, without limitation, any damages arising out of the use of the *Software*, loss of use of the *Software*, or damage of any sort to the *Licensee*.

5. The *Licensee* agrees that any reports or publications of results obtained with the *Software* will acknowledge its use by the appropriate literature citation: Güntert, P., Salzmann, M., Braun, D. and Wüthrich, K. (2000). Sequence-specific NMR assignment of proteins by global fragment mapping with the program MAPPER. *J. Biomol. NMR* **18**, 129-137.
